12. ☐ Note the attached Information <i>Disclosure Statement</i> (s). (13. ☐ Other: See Continuation Sheet.	PTO/SB/08) Paper No(s)		
/Brian T. Pendleton/ Supervisory Patent Examiner, Art Unit 2425	/Pinkal R. Chokshi/ Examiner, Art Unit 2425		

Continuation of 13. Other: Applicant asserts that the combination of Piesing and Bulkowski does not disclose restarting the received timebase if the identification signal is present. Examiner respectfully disagrees. Piesing discloses (¶0024, ¶0025) that the receiver monitors the presence of the identification signal and interruption of the interactive application is suspended when the identification signal is returned. Piesing does not explicitly teach that the timebase is restarted. However, Bulkowski discloses (¶0083, ¶0084) that the client device uses the pulses to recreate the time base associated with the data stream. Bulkowski further discloses (¶0077) that the time pulses, which are associated with upcoming time base changes, have two associated times such as time at which the change takes place, and a new time to set the time base at that time. By combining Bulkowski with Piesing renders obviousness of the claim.
